The United States has claimed that it struck two Iranian surveillance radar sites and destroyed at least four drones in the process. The information was stated by the US Central Command (CENTCOM), the American military command in the Middle East. The report was highlighted by BBC on Saturday (June 6).

CENTCOM said the operations targeted radar installations located in Qeshm Island and near the Guruk coastal area. According to the US, Iran had launched drones toward American naval vessels operating in the Strait of Hormuz, and the drones were shot down as a defensive response.

Meanwhile, Iranian media outlet Tasnim News reported explosions in the Sirik port area of Hormozgan province in southern Iran, with multiple blasts reportedly heard.

Tehran, however, presented a different account, saying Iranian forces fired warning shots to signal US forces in the Gulf of Oman. It added that there was no intention to carry out an attack.
